Lecture 03 • Component State

Component Lifecycle & Hook Architecture

Module 2

Lecture Notes | Q&A (14) | Resources

SYLLABUS PROGRESS — 1 of 3 complete

- 1. Setup & Development Environment — 12m
- **2. Component Lifecycle & State — 34m**
- 3. Advanced Hooks (useReducer & Context) — 22m

Module 2 Assessment
10 questions • Passing grade: 80%
Take Quiz

Key takeaways from this lecture

- State variables persist across re-renders in functional components.
- Never call hooks inside loops, conditional statements, or nested functions.
- State updates trigger reconciliation algorithm against the Virtual DOM.
